More than 6 million students participate in 4-H whose roots are in Ohio

By DOUG GRAVES Ohio Correspondent

CONOVER, Ohio -National 4-H Week is Oct. 3-9 this year. It is a time to recognize the work of both students and educators.

According to the National 4-H Council more than 6 million students participate in 4-H programs in the United Above: A.B. Graham often States. "In 4-H programs, kids and teens complete hands-on projects in areas like health, as he did this one in Greene guidance from adult mentors

science, agriculture and civic County in 1955. Graham died engagement in a positive envi- five years later. (photo subronment where they receive mitted) and are encouraged to take on proactive leadership roles.

Kids experience 4-H in every county and parish in the country through in-school and after-school programs, school and community clubs and 4-H camps," the council says on its website.

'4-H's reach and depth are unmatched, reaching kids in every corner of America - from urban neighborhoods to

> rural farming communities. (Ohio roots on page 4)

Kentucky Ag Development Board to fund Commonwealth rural development projects

BV DOUG SCHMITZ Iowa Correspondent

BEREA, Ky. - The Kentucky Agricultural suburban schoolyards to Development Board at its monthly board meeting approved \$2,363,839 for agricultural diversification and rural development projects across the Commonwealth.

Under state- and county-funded projects, Berea College's Grow Appalachia was approved for \$260,575 over two years to expand the Eastern Kentucky Direct Integrated Grower Support program in eastern Kentucky.

Grow Appalachia, a community garden-based food security program, headquartered at Berea College in Berea, Ky., is currently in its seventh year of operation, working with 31 partner sites in six central Appalachian states for 2016.

To date, approximately 2,384,167 pounds of organically grown fruits and vegetables have been harvested by 4,375 participating families, said Mark Walden, Grow Appalachia associate director.

"Grow Appalachia, a strategic initiative of Berea College, was established to address food insecurity in Appalachia," he said. "Grow Appalachia was founded in 2009 through a serendipitous call and generous funding from John Paul Dejoria, co-founder of John Paul Mitchell Systems and Patron Tequila.

"The generous funding opportunity arrived at Berea College in Berea, Ky., and was passed along to the desk of David Cooke, a W. Va., native and lifelong gardener," he added. "David developed the pro-

University of Kentucky student will represent 4-H on the world stage

By DOUG GRAVES Ohio Correspondent

LEXINGTON, Ky. – University of Kentucky senior Dylan Gentry has always enjoyed talking to groups and undertaking difficult tasks. When he was recently selected to represent the United States as part of the Global 4-H Network he felt right at home.

The Global 4-H Network is comprised of delegates from 70 countries and represents the world's seven million 4-Hers. He is one of just three North American delegates. Gentry was selected by the National 4-H Council after a national application process.

"When I was a senior in high school, I was on the State Team Council, which is a group of the top high school 4-Hers in Kentucky," Gentry said. "That group of 30 elite students were an amazing influence on me and that led to me becoming the 4-H state treasurer. Being state treasurer allowed me to see the national and international opportunities such as this one, and that's where I am today."

Flashback, if you will. When Gentry was a pre-teen, he wanted to become a Boy Scout, not a 4-H-er.

"My father being the Green County 4-H agent got me started in 4-H," Gentry recalls. "When I was a young boy, I told my dad I wanted to be in the Boy Scouts and not 4-H, but by the time I got into middle school my mind changed when I saw all the leadership activities and the opportunity to meet new friends. I liked the social aspect of 4-H."

The 'hook', Dylan says, was the speech component of a 4-H County Ham project that he started his freshman year in high school. And it wasn't ham curing process that thrilled him, but rather the three-to-five-minute speech on the topic that opened this door.

Going from a tiny, cured ham project to the world stage. Not bad for one who never worked the farm.

"I grew up on a farm but never worked on one," Dylan said. "If you told me to go out and cut hay for the cows, I wouldn't be able to do that. But I grew up with people who did work the farm, so I have a great appreciation for all their hard work. My grandfather is a farmer, and I grew up on his farm. He works tirelessly every day, so that's where my appreciation for agriculture comes from."

Above: UK senior Dylan Gentry will represent the United States during the Global 4-H Network Summit this month. He is the son of Green County 4-H agent Tyrone Gentry. (photo submitted)

During their annual meeting this month, delegates will discuss ways they can promote 4-H across the world and use 4-H to enhance economies and communities. Gentry will speak on behalf of the U.S. during the summit. During his yearlong appointment, he will also speak on behalf of 4-H programs in the U.S. as requested.

"This is a new, exciting opportunity for me to represent UK, Kentucky 4-H and the United States," said Gentry, a family sciences and community and leadership development double major from Greensburg.

Rachel Noble, Kentucky 4-H youth development specialist, encouraged Gentry to apply. As a UK student, Gentry served two semesters as Noble's intern.

Gentry's first internship was through the UK Cooperative Extension Service summer internship program. His second internship with Noble was part of a national grant to support the Globalizing Extension Innovation Network.

"Dylan is a prime candidate to represent Kentucky 4-H and the U.S. because he has extensive involvement with 4-H and a good understanding of 4-H youth development and the national Cooperative Extension System," Noble said.

At UK, Gentry serves as president of the Collegiate 4-H. He has also interned with Jennifer Hunter, assistant director for family and consumer sciences extension and Jordan Crain, Green County family and consumer sciences extension agent. He was the Kentucky state 4-H treasurer for 2018-2019 and a program assistant to the 2017-2018 state 4-H officers.

"With the world being more connected now than ever, I hope to get a more holistic understanding of how the Cooperative Extension Service interacts with different counties," he said.

Dylan plans to become an extension agent upon graduation.

FROM PAGE 1

gram around the concept that if you provide folks with the tools, resources, and knowledge required and then get out of the way, folks can be successful at producing food for their families."

He said Berea College was willing to take on this project in honor of its 8th Great Commitment to serve Appalachia, which is "to engage Appalachian communities, families, and students in partnership for mutual learning, growth, and service."

He added, "Grow Appalachia will also use the funds to increase the capacity of new and established farms in eastern Kentucky by delivering intensive technical support, allowing farms to adopt efficient production practices that will lead to growth in the agriculture sector, and more profitable farms in the region."

He said the project will include the following direct support to farmers:

- On-farm technical support and consulting
 - Production planning assistance
- Farmer education, training, and networking
- Connections to helpful organizations and agencies
- Installation assistance and resource support for the adoption of new efficient production practices
- Development of high tunnel production systems and crop budgets adapted to the region

He added the funds will further enhance Grow Appalachia's "robust technical support system in its Farmer Development Team," which delivers educational opportunities and on-farm support for farmers in Central Appalachia.

"The funds allocated by the Kentucky Office of Agriculture Policy through the Kentucky Agriculture Development Fund will expand educational series, both in-person and digital components, to expand the knowledge of efficient adaptable practices for regional producers," he said.

In addition, he said the funds will be available to install demonstration systems on farms in the region, with a commitment by "the 'demo' farm to allow other producers to come out and see the system in operation."

"There will be a focus on high tunnel specific technical assistance, including the development of production systems and crop budgets that are dialed in to the unique markets and production consideration for producers in eastern Kentucky," he said.

He said the funds will be utilized to "increase efficiencies, expand production capacity, and provide an avenue for peer-to-peer learning opportunities to farmers in the region. (It) helps Grow Appalachia achieve its mission of creat-

ing healthy, resilient, and economically viable food systems."

Creation Gardens

Creation Gardens, Inc., was approved for \$373,259 in state funds, as a forgivable loan, for renovating and repurposing a facility in Bardstown, Ky., for e-commerce of their products.

In 2018, the company transitioned from Creation Gardens to What Chefs Want

"We are a 100-percent family (woman-owned) company whose mission is to deliver What Chefs Want," said John Thomas, What Chefs Want vice president, butchery. "We are a unique food service company that has replaced the expense of a traditional sales force with several highly-valued services that sell themselves."

He said the funds will be used to retrofit the company's current Bardstown facility.

"The facility is centrally located in the state, allowing us a geographic advantage when sourcing local produce," he said. "We will aggregate produce in Bardstown and move through our Louisville distribution center, which supplies all of our distribution centers."

In addition to increased temperature-controlled storage (i.e., refrigerated, frozen, and dry), he said the company will offer e-commerce fulfillment to local and regional producers.

"The pandemic saw a large increase in the volume of food-related e-commerce demand," he said. "Experts estimate the pandemic moved food-related e-commerce ahead three years.

"Although the potential is great, it is an expensive and challenging growth avenue we feel we can open, and allow access to smaller producers," he added. "We also have an area of the building set aside for further produce processing if there is an opportunity to do value-added local produce items."

Ohio roots

FROM PAGE 1

Our network of 500,000 volunteers and 3,500 4-H professionals provide caring and supportive mentoring to all 6 million 4-H'ers, helping them grow into true leaders today and in life."

And it all started in Ohio.

Albert Belmont Graham (better known as A.B.) gave birth to the 4-H program in Clark County, Ohio, in 1902.

Graham was 32 when he started this program, which has grown into a national organization with 25 million alumni. Graham is also instrumental in the establishment of junior high schools and was a founding member of what is now known as the Association for Communication Excellence, an international professional group for land-grant communicators. Graham was not only a 4-H proponent but a

teacher as well.

The A.B. Graham Center (former building of the Miami East School District) was built in 1917 and still stands. The building sits on the same site where A.B. Graham began his career in education and serves as a museum honoring both Graham and the 4-H program.

Today the building serves the local community as a place to meet, socialize and conduct business while at the same time recognizing Graham's work. It is also home to three local 4-H clubs.

Jim Graham, A.B.'s grandson, recalls his grandfather's patience as he helped Jim with schoolwork and showed him how to plant beans and corn, and other lessons that led to a lifelong interest in gardening.

A.B. Graham was born in Lena, Ohio, on March 13, 1868. He was a schoolmaster and agriculture extension pioneer at Ohio State University.

Graham taught at an integrated rural school in Springfield Township in Clark County. The very first official 4-H meeting was an agriculture experimental club.

It was in 1902 that Graham held his first meeting of what was then called the Boys and Girls Agriculture Club in Springfield, Ohio. Three years later he became the first superintendent of Agriculture Extension at Ohio State University.

There were similar clubs created by other individuals, but none took root as A.B. Graham's did. O.J. Kern started a similar club in February 1902 in Winnebago County, Illinois. Many of these early clubs (which were project oriented) were called Tomato Clubs, Corn Clubs or Canning Clubs.

The well recognized 4-H clover design was created in 1910 by Jessie Field Shumbaugh, who was known then as the "Mother of 4-H Clubs".

In 1915 Graham moved to

Washington, D.C. as head of agriculture specialists in the federal Extension Service. He retired in 1938 and moved back to Clintonville, Ohio.

Graham was honored by the U.S. Postal Service with a special 4-H 50th

anniversary stamp. Graham died eight years later on Jan. 14, 1960. 4-H began to reach out across rural areas and began to extend into urban

areas in the 1950s. The organization changed in the 1960s, combining 4-H groups divided by gender or race into a single integrated program.

Those at the museum say that A.B.'s great-grandchildren are continuing the family's 4-H legacy as two of his great-grandchildren are partaking in 4-H projects of rabbits, rockets and photography.

The A.B. Graham Center is located at 8025 E. state Route 36 in Conover, Ohio. For more information visit www. abgraham.org.

Ohio 4-H personnel will offer School Garden Conference on Oct. 22

By DOUG GRAVES Ohio Correspondent

COLUMBUS, Ohio -- Reading, writing and arithmetic are still cornerstones of learning in any public or private school, but some educators are now advocating students need access to green space to relax and learn more about nature.

No one knows this more than OSU Extension 4-H personnel, who will coordinate their seventh annual Ohio School Garden Conference on Oct. 22. This year's theme is "Voices From the Field".

"Research shows that school gardens can support and encourage

(Garden continued on page 8)

Below: The USDA reports there are nearly 5,000 school gardens across the United States. (photo submitted)

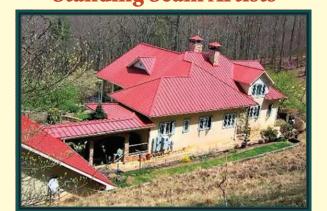

Above: According to Ohio State University Extension, anyone wanting to create a school garden should evaluate the allotted space, check the soil health, collaborate on the design, property select plants, find resources and perhaps build partnerships, (photo submitted)

Garden

FROM PAGE 7

healthy eating as a key factor of children's' physical well-being, which can aid their social and academic success," said Sue Hogan, Ohio 4-H youth development educator for Ohio State University Extension.

The conference is hosted by OSU Extension 4-H personnel and will be held Oct. 22 from 9 a.m. to 3:30 p.m. at the Nationwide & Ohio Farm Bureau 4-H Center at 2201 Fred Taylor Drive on the Ohio State University campus.

The conference provides both a networking opportunity and a chance to learn from others who are actively engaged in school gardening and/or provide expertise and education to those who do, Hogan says.

"There are amazing school gardeners in Ohio, and we are working together to make school gardening a solid part of the culture in our state," Hogan said.

One such school gardening success story can be found in Loveland, Ohio, where Loveland Learning Garden (previously named Granny's Garden School) provides outdoor, schoolyard nature education programming that includes vegetable and floral gardens and a nature trail as environments for hands-on learning in the natural world.

Roberta Paola started Granny's Garden School in 2004. Paola's love for soil and gardening led her to create a community garden at Loveland Elementary School, where all the school children could have the chance to enjoy the simple splendor of the many flowers she grew around the school. Her original goal was to give the other children the chance to pick flowers, but it took on a life of its own

and grew to be one of the largest and most comprehensive school garden education programs in the country.

In 10 years, Paola's school flower garden blossomed to include 100 vegetable and flower beds, a small apple orchard and a three-quarter mile nature trail on the school property. Each week, students in grades 1-4 spent 30 minutes weeding, planting and harvesting in the gardens.

"This led to the development and sustainability of hands-on learning experiences for children through plant-based programs," Paola said. "The focus then was education, not nutrition."

Paola closed the doors to Granny's Garden School in 2016 due to funding, but Loveland Learning Garden revived it. Hogan has seen growth in school gardens across the state and say it's a win-win for educators and students alike. And that the Ohio School Garden Conference can help keep a good thing going.

"By teaching adults to use gardening as a context for learning, we are providing skills for the youth who will benefit from participant knowledge to practice real-world science, among other topics," Hogan said. "In fact, most seasoned school gardeners agree that almost any subject and live lesson

can be taught in a garden and may also lead to workforce development."

Topics at the conference include herbal gardens, plant diseases, pollinators, farm-to-school, how to start a school garden, French immersion garden during a pandemic, school gardening and autism, season extension, school garden stories from teachers and much more.

"The conference is open to teachers, educational administrators, after-school staff, government employees, nonprofit personal, interested community members and others who want to start, maintain or support a school garden," Hogan said.

Trade looking forward to 2022 production

Even though harvest is just getting a good start across the Corn Belt, we are already starting to see interest placed on next year's production. Trade is looking at this year's crop potential and trying to determine what will be needed for new crop acres. Given the current stocksto-use ratios on new crop corn, soybeans and wheat, none of MARKET ANALYSIS the crops can afford to lose any By Karl Setzer of their current acreage. This is already starting to cause the

to try and prevent acres from declining. The most interest has been on soybeans where new crop stocks to use

individual commodities to show strength

is already projected at a minimal 3.5 percent, and that may be too high. Given this scenario it may take two and possibly three years for the soybean balance sheets to improve, and that is with high acreage and yields

both. Corn futures are starting to react to this situation, as that crop needs to be large as well. The most concern in the corn complex right now

is that elevated input costs will deter plantings. This is especially from the fertilizer costs which are already well above a year ago.

Trade is showing more interest in what the world's long-term soybean demand will be, manly from China. The USDA is currently projecting Chinese soybean imports of 101 mmt this year, even though China claims the volume will be less. This number is being formulated by historical trends, not what China has booked so far, which the USDA believes is more accurate. The real question is where soybeans will be sourced from, as a large South American crop will take business away from the United States.

Expansion is also being predicted in Brazil corn and soybean plantings this coming year, and with it is higher fertilizer demand estimates as well.

Experts believe Brazil will use 43 million tons of fertilizer this coming year, a 6 percent increase from last year. The higher income that was generated by last year's crops will allow farmers in Brazil to expand fertilizer use on land that is already in production as well. It is not out of the question this will increase production even more than currently being forecast.

One factor that has remained constant with this year's crops is high variability. Several regions of the United States have experienced less than favorable growing conditions, especially in the Upper Plains and Pacific Northwest. While crop production has been affected in these areas, it is not a total loss.

This is raising questions over how much will be zeroed out this year while other regions will only see a slight reduction to yield. There are several other regions of the United States that are reporting quite favorable yield potential, with several claiming they will see record production. This is generating more confusion in the market and much disagreement with the latest USDA production estimates, both that numbers should be high and lower.

This variability is not confined to the United States. The most uncertainty in the global market is on wheat where countries such as Russia and Brazil claim their wheat crops have been hurt be adverse weather. Canadian officials also believe their wheat production will be slashed this year from drought. Other wheat producers are forecasting larger crops than first predicted though, including Ukraine and Australia. There is little indication these variable crops reports will end in the near future, which is going to keep futures market volatility elevated as well.

What is becoming a greater issue in the global market than supply is logistics. The most talked about of these is in South America where low water levels are hampering export efforts. Another country with logistic issues is China where COVID has caused ports to be shut down in recent weeks and now ships are starting to again be on and off loaded. What is quickly becoming a logistical issue is in country where import taxes have been relaxed and buyers are trying to take in as much product as possible before rates are again raised. The question is what impact these may have on U.S. loadings with the approaching harvest.

Seasonal tendencies are expected to start giving the market some much needed support. Historically soybeans have established a low in August and rebounded from there. In the past six years corn has made a low in late August or early September. We need to remember that every year is different however, and we are already at historically high values on both corn and soybeans. This may limit additional buying interest.

4-H Shooting Sports program helps students learn safety and have fun

By CELESTE BAUMGARTNER **Ohio Correspondent**

HAMILTON, Ohio — In 2021, Ohio had 3,713 4-H Shooting Sports project enrollments. Sixty-four 4-H clubs across the state are devoted exclusively to shooting sports and 823 certified shooting sports volunteer instructors are helping those kids learn marksmanship and a whole lot more, said Kirk Bloir, Ohio State University (OSU) Assistant Director, 4-H Youth Development.

The Butler County Sharpshooters 4-H club has seen a lot of growth in its 28 years, said Barb Haverkos, who currently, with her husband, Steve, coordinates the group. They have 70 to 80 kids participate each year. They start with an eight-week session in the fall, are off for the holidays, and start up again in January. They start shooting outside in April.

"This is an introduction to our 2022 season," said Barb on the first night of the fall session. "I had more kids than I expected. Our club offers rifle, pistol. shotgun, archery, muzzleloading, crossbow, living history, and hunting and wildlife. Our youngest ones start with the Safe Use of Guns."

Meredith Briski came through the program herself and is now an instructor. 4-H shooting sports is different from other shooting sports because they don't teach competitive skills just for the sake of competition, she said.

'We're here for youth development and shooting sports is a tool we use for youth development," Briski said. "They are learning about safety. They're developing self-confidence, the ability to set a goal and reach it. This is something that's accessible to anybody, at any ability level. They're getting the same benefits as other sports, but it gives them a more level playing field."

Cecilia Guenther participates in rifle, pistol, shotgun, archery, and muzzle loading. Her favorites are pistol and archery. This year she blue-ribboned in pistol and the year before in archery. She's 15 years old now and started when she was eight or nine.

"Most of my friends think shooting sports is pretty cool," she said. "I've had friends come to try it out. I'm never afraid because here at the sportsmen's club we've been taught how to handle firearms safely. Safety is emphasized. I love that it's like a family here and everybody is helping everybody out."

Two of Colleen Scharfenbert's children have taken part in the program. Megan is now in college and Ian is still involved. She liked it so much she became an

"I love it because kids are so curious." she said. "They want to know (about guns) so why not teach them upfront? That kind of curbs that curiosity. They know what to do if they're confronted with someone who is not handling a gun properly. I have guns in my home and no worries.'

Below: Amelia Kessler takes aim. Erica Landthorne and Amelia's sister, Abbie, cheered when she hit the target. They were having fun.

Above: Steve Haverkos watches while Cecilia Guenther aims her pistol, one of her favorite disciplines in the 4-H Shooting Sports program. She took a blue-ribbon in it at the Butler County Fair.

Jon Sander's son, Connor, was dry firing a pistol in the inside range, it was his first night. His dad was glad to see him learning the right way to do things.

"He's learning the right way to do things," Sanders said. "How to handle a gun, what to do when he sees something incorrect being done."

"I think it reaches a different group of kids than standard 4-H," Barb said. "I think it reaches kids that aren't necessarily involved in team sports. They like this activity because it is more individual. I have seen the kids grow year after year in the program. I like what I see and because of that, I have staved with it.'

Meanwhile, out on the archery range, Abbie Kessler and Erica Landthorne cheered when Amelia Kessler hit the target. They were having fun.

And that's why instructor Mike Wilson has stayed with the group as an instructor for 28 years.

Below: Connor Sanders was dry firing a pistol in the inside range. It was his first night with the Butler County Sharpshooters. His dad was glad to see him learning the right way to do things.

Drought hurting New Mexico cattle industry

SANTA FE, N.M. (AP) – State Sen. Pat Woods saw a lot of it over this past year - cow culled from a herd and sent to the slaughterhouse because their owners couldn't afford to fee them anymore.

"It was awfully dry," said the longtime rancher and Republican lawmaker from

Broadview, a ranching community on New Mexico's eastern plains. "They were forecasting it would never rain again and it was going to be such a tough year that a lot of ranchers didn't want to put their money into the cow."

The drought strikes again - and its

effects are having a significant impact price of beef and veal went up 6.5 on the state's cattle ranching industry, according to a new report from the New Mexico State University Department of Animal and Range Sciences.

The report, which was presented to Woods and other members of legislative panel, laid out in stark terms how drought conditions are hurting ranchers.

Some climate experts have called the drought enveloping the southwestern part of the country one of the worst in centuries. About two-thirds of the state has been experiencing moderate to extreme drought conditions in recent weeks. And that was after a healthy monsoon season in many areas.

Among other outcomes, drought conditions decrease animal growth, diminish forage opportunities for livestock, increase the cost of production and decrease calf prices, the report said. That in turn leads to extra costs when it comes to restocking herds that have been thinned out.

Calling the situation "the perfect storm of drought and pandemic," Loren Patterson, president-elect of the New Mexico Cattle Growers Association, said the industry is reeling under "all of the above" pointed out in the study.

"It has a pretty big impact on us economically," he said by phone following the presentation of the report. "It raises our cost of production. Not only do we have to reduce cow numbers, we have to supplement more for the cows

Economically speaking, the cattle industry is a meaty, if not mighty, force. A 2019 report, from the environmental publication Sustainability, said its role in the state economy is "substantial." Using 2012 data, it said about 44 percent of revenue from the state's agricultural industry is derived from cattle.

Patterson said while those who work in agriculture are accustomed to dealing with problems brought on by long-term drought, "it's always a little tougher than you prepare for."

Ultimately, consumers will feel the brunt of the impacts at meat markets, grocery stores and restaurants, Patterson said.

The U.S. Bureau of Labor Statistics' Consumer Price Index reports the percent between July 2020 and July 2021, though it does not provide an explanation for the increase.

And there may be less beef to go around. Patterson said ranchers who have thinned herds are now trying to restock them by keeping female cows so they birth calves. Those cows are not headed into the food supply chain anytime soon. That can affect the beef supply for up to three years, he said.

Restocking is expensive, the report

Rep. Candy Spence Ezzell (R-Roswell), a rancher and a member of the interim committee, said she has experienced that cost firsthand, noting in an interview she had to sell off more than 100 of her herd at the end of 2019 because of the effects drought had on her operation.

Now, trying to restock, she finds cows once worth \$700 going for nearly twice that price as demand outpaces supply. "That's a scarcity of a commodity that we as ranchers need," Ezzell said.

Carla Gomez, a small cattle rancher in Mora County, said the drought has had a "devastating" impact on fellow ranchers in her area, despite a season of really good rainfall.

"Here in Mora, a lot of people who have had cattle in the past don't anymore because of this continual drought cycle," she said. "People sell their cattle. Some people build the herd back up and some don't."

The report offered a number of recommendations for easing the drought's effects, such as weaning and selling offspring early to reduce grazing fees; providing supplements to replace milk and grass for feed purposes; culling both old and young "low productivity" animals out of herds; keeping animals in a pen to feed them stored-up food products. Some of these options are expensive, the report noted.

While Patterson said these options will "absolutely" help, selling off livestock or sending them to the slaughterhouse is "economically devastating" for cattle ranchers. And, he said, it will cost the state and local counties in tax revenue because cattle ranchers "pay taxes on every head of livestock, so obviously the counties and state will realize less taxes."

360 FERTILIZER & CHEMICALS

Gypsum is an economical way to add calcium and sulfur, as well as open your wet waterlogged soil for better water & air infiltration. Call Lime and Gypsum Products to learn more or place an order. 517-726-1492. 989-867-4611.

Increase sulfur & water soluble calcium w/mined gypsum. Each ton of gypsum adds about 300 pounds of useable sulfate sulfur & 400 pounds of water soluble calcium. Call Lime and Gypsum Products, Inc. for more information. 517-726-1492 or 989-867-4611.

Is Tar Spot a problem on your farm this year? Most plant leaf disease starts in wet sealed soil. To improve soil structure & reduce yield effects from sealed soil, call Lime and Gypsum Products. 517-726-1492 or 989-867-4611.

Organic liq. fish fertilizer starting

at \$4.75/gallon. Provides plant & soil health & microbial activity. 419-704-4892 Oregon, OH.

Potential for perennial crops studied at University of Minnesota

MOORHEAD, Minn. (AP) - Don Initiative," Wyse said. Wyse has long been an evangelist for perennial crops. The University of Minnesota professor, who leads the U of M Forever Green Initiative, now thinks the potential of those crops is beginning to be realized.

"It took us 30 years to get to this point, but we now have what I call real crops that have real possibility for the marketplace and for planting by farmers," Wyse said. "And it's really, really exciting."

Perennial crops can help reduce environmental impact agriculture, and they fit well with the regenerative agriculture movement that focuses on soil health.

The largest crop yet of Kernza was recently harvested. Research shows Kernza improves water quality by reducing fertilizer pollution of water, and it can efficiently store carbon in the soil, helping reduce carbon dioxide, a greenhouse gas. It also requires less fertilizer and pesticide than many traditional crops, Minnesota Public Radio News reported.

"It's basically continuous living cover, protecting soil and water, enhancing soil health. That's the basis of all 16 crops that are being developed in the Forever Green

Kernza is just the first of 16 perennial crops being developed at the U of M as part of the effort to make Minnesota farms more environmentally friendly.

Researchers at the University of Minnesota have worked with the Kansas-based Land Institute to improve Kernza genetics. There are still challenges for farmers and plant breeders. Kernza yields tend to decline after two years, limiting how long farmers can keep the crop on a

Wyse is confident that problem will be resolved as new varieties are developed.

The U of M released a new Kernza variety last year and a second variety is slated for release in 2023.

Farmers aren't yet busting down the door to grow Kernza, but there's a steady stream of people calling, wanting to learn more about the crop, said western Minnesota farmer Carmen Fernholz, an early adopter who first grew Kernza on his farm in 2011.

Kernza is a cousin of wheat, developed from a perennial grass. Researchers tout its sweet, nutty flavor for use in baking, beer and a cereal product General Mills plans to

soon have on the shelves at Whole grains, it appears that it was less Foods.

Fernholz recently sold a semi load of the grain to a food company. He's part of the new Perennial Promise Growers Cooperative, created to help farmers produce and market the

"It's certainly not to the scale that we intend to take it over the next few years," Fernholz said. "But to say that the market is developing, yes. To say that we can grow lots and lots of acres at this stage of development,

And that's always the challenge with a new crop. Farmers want to know there's a market before they plant, but to expand markets, you need more crop to sell. Fernholz will expand his Kernza acres next year. As an organic farmer, he believes in the environmental benefits of perennial crops, and it helps his bottom line.

"If we can continue to achieve the numbers that we are as far as marketing the Kernza, and the yield that we're getting, it will definitely be profitable," he said.

The drought this year reduced his Kernza yields somewhat, but the deep-rooted perennial plant generally fared well in the dry conditions.

"Relative to a lot of the other small

impacted," said U of M researcher Jacob Jungers. "The plants look healthier, generally, they were a little bit greener, and look less droughtstressed than some of the annual small grain crops."

Researchers are still analyzing this year's crop yields to learn more about the drought impact.

Kernza is very small in terms of crop production with about 4,000 acres grown nationwide. Minnesota is the leading producer with just more than 1,300 acres.

Jungers believes it's now realistic to double Kernza production each

"There's a tipping point in terms of acreage in the state and in the nation," he said. "Once we achieve that sort of tipping point of acreage, then there's going to be enough supply for the larger companies, for national-scale product."

Colin Cureton, director of adoption and scaling for the Forever Green Initiative, said, "We're also getting significant international interest. So there's really a need to grow to meet that. How do we export this product from Minnesota to the world is a big and exciting question."

Kernza is still a niche crop, and researchers say it will likely never replace mainstay grains like wheat.

But this a good time for perennial crops to be taking off, Cureton said. There's growing interest among farmers in soil health, carbon storage and regenerative agriculture, and crops like Kernza are a good fit. There's also growing demand from consumers for sustainable

Cureton compares perennial crops to the development of wind and solar energy decades ago. "And so that's what's really exciting about these crops, which are really in their early stage," he said. "I feel like with these crops, we're kind of where renewable energy was about 20 years ago, but

more Kernza is grown, researchers are learning more about the benefits. Kernza stover, the stalks and leaves left in the field after harvest, makes a good quality livestock feed. And researchers have just begun to explore the potential benefits to wildlife from having a perennial crop on the land, Jungers

Wyse is ready for the expansion of the next perennial crop – an oil seed called camelina, which he expects to reach 2 million acres of crop production in the next five years.

agriculture.

we're making really rapid progress."

Fish Eye Farms sits on two acres in Detroit and has 40 different crops

By Kevin Walker Michigan Correspondent

DETROIT, Mich. - The Michigan Commission on Agriculture recently visited the urban farm of its newest member, Andy Chae of Detroit, who joined the rule making body just four

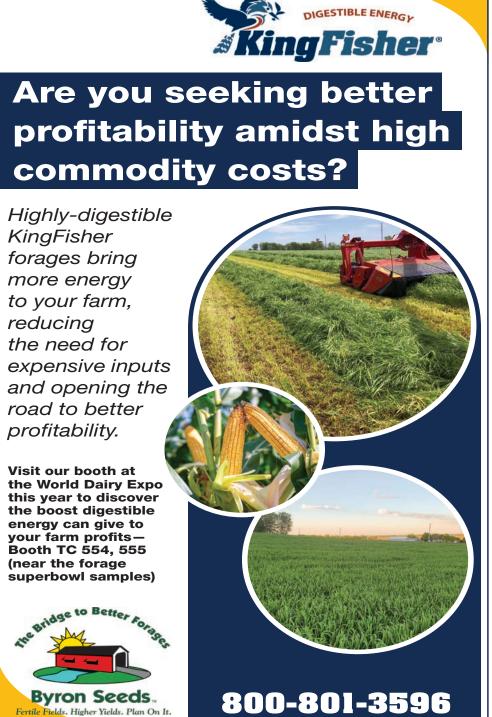

Below: Amy Eckert, co-owner of Fish Eye an announcement after a visit to Chae's Farms, picks kale at her farm in Detroit.

months ago.

According to the Michigan Dept. of Agriculture and Rural Development Director Gary McDowell, first-generation and minority farmers can help further grow the state's \$104 billion food and agriculture industry. "Michigan's food and agriculture industry is a powerhouse of diverse products," McDowell said in

(Fish eye continued on page 2B)

Fish eye

FROM PAGE 1B

farm in the midtown area of Detroit, not far from Wayne State University. "It's exciting to see new and minority farmers discover a love for agriculture to make farming part of their careers and

According to Chae, whose two-acre parcel of land is called Fish Eye Farms, there are farms all over the city of Detroit. He says there are 10 to 15 for profit farms such as his in the area around the university alone. He added there are likely many more not for profit farms in the area as well. Chae, who is in his early 30s, got started in urban farming in 2012 in Chicago, where he worked on a youth centered farm. He started Fish Eye Farms in 2015 with his wife Amy

The farm grows all kinds of vegetables and herbs: in his words, they grow "a lot of stuff, like 40 different crops a season. Heirloom tomatoes, kale, herbs, peppers, turnips, a lot of things. We try to keep things diverse, so people don't get tired of our offerings." Fish Eye Farms is partly a Community Supported Agriculture, a CSA. Right now, the farm is 75 percent a CSA, with 90 members. He charges \$550 for a membership that lasts 20 weeks, which includes seven

to eight items per week. There is also a smaller CSA membership available for less money, as well as an add on that includes bread and eggs.

The farm is also a restaurant supplier, which currently services eight restaurants in the area. Chae expressed focus on restaurants," he said.

certified Naturally Grown, which is a certification outside the USDA. As part of the announcement of the Michigan Ag Commission's tour of Chae's farm, Michigan Ag Commission Chair Dru Montri said, "as commissioners, it's important to visit farming and agricultural operations of all sizes and locations to get a deeper understanding of their challenges and what we can do to support them."

Retail pork prices set record high in July

By Doug Schmitz Iowa Correspondent

LAKEWOOD, Colo. – The retail pork price set a record high in July, while strong hog prices are continuing to support producer returns, according to an Aug. 13 analysis by the Livestock Marketing Information Center.

"The retail pork price set a new record high of \$4.60 per pound in July, beating last month's record of \$4.55," the analysis read. "July's price was 1.2 percent above the prior month, and 10.1 percent above last year.

"Strong retail pork prices have supported the cutout value, which was \$125.23 per cwt (central hundredweight or 100 pounds), the highest value since mid-June when it reached \$134.13," the analysis added.

In addition, cutout has been supported by a strong belly primal value, which reached a record high of \$233.78 per cwt (central hundredweight or 100 pounds).

"Marginal strength in the loin and picnic primal values of \$116.42 and \$96.18 per cwt (central hundredweight or 100 pounds), respectively, (the previous week) have also supported the cutout value," the analysis said.

"Record retail pork prices and a strong

pork cutout value are aiding hog prices (National Base Carcass), which were \$105.12 per cwt last week, \$3.23 off the high set in late-June, but nearly double the price from 2020," the analysis added.

Moreover, strong hog prices are continuing to support producer returns.

"Iowa State University's July estimated returns for a farrow-to-finish operation were \$51.41 per head, a slight dip from \$62.58 the prior month, but much improved from the \$21.55 loss just a year ago," the analysis said.

"Estimated returns have been positive for the last six months which have been supported by improved carcass selling prices averaging over \$108 per cwt (central hundredweight or 100 pounds) the last four months," the analysis added. "July's carcass selling price was \$109.08 per cwt (central hundredweight or 100 pounds), with a breakeven price of \$86.34 per cwt (central hundredweight or 100 pounds)."

Ron Plain, University of Missouri professor emeritus of agricultural and applied economics, said in his Aug. 30 hog analysis, "Calculations by Lee Schulz at Iowa State University estimated farrow-to-finish profits at \$62.58 per head for hogs marketed in June. That was the fifth consecutive profitable month and the highest profit

since September 2014."

Plain said because COVID-19 disrupted hog slaughter in 2020, the relationship between the heavyweight inventories in the USDA's June 1 Quarterly Hogs & Pigs Report and the subsequent June-August hog slaughter "is more consistent in 2021 and 2019."

"The average price of pork in grocery stores during the month of July, \$4.602 per pound, was record high for the fourth consecutive month," he said. "The average retail pork price was up 5.6 cents from June. and up 42.3 cents from July 2020. Retail pork prices often peak one month after the peak in cash hog prices."

"Imports equaled 3.6 percent of U.S. pork production, and exports equaled 27.5 percent of our production," he said. "The increase in imports reflects bigger shipments from most of our major foreign suppliers. The increase in exports is a balance of a big drop in shipments to China and growth in U.S. pork exports to Mexico, Japan, Canada and South Korea.

"As should be expected, large profits this year are impacting sow slaughter," he added. "During the first 11 weeks after the first of June, U.S. sow slaughter was down 10.1 percent. The drop is due in part to the fact that sow slaughter was up 13 percent during the same period last year."

Currently, the USDA is moving to shield U.S. pork exports should African swine fever spread from the Dominican Republic to Puerto Rico or the U.S. Virgin Islands, he said.

"Under trade rules for Foreign Animal Disease Protection Zones, an outbreak in one zone does not necessarily stop trade from another zone."

Co-ops Premier Ag, White River merge to become Premier Companies

By Doug Graves
Ohio Correspondent

SEYMOUR, Ind. – What was once White River Cooperative and Premier Ag Co-Op is now Premier Companies.

On Sept. 1, the two southern Indiana cooperatives joined forces to bolster their support of agriculture and energy services in southern Indiana, southwest Ohio and central Kentucky.

White River Co-Op, based in Loogootee, Ind., was founded in 1928 and served nine counties. The company had an annual revenue of \$161 million and employed 135.

Premier Ag Co-Op, based in Seymour, was founded in 1927 and served three states. The company had an annual revenue between \$66-\$100 million annually and had 14 retail outlets. With the merger, the headquarters will be at 811 W. Second St. in Seymour. The new cooperative will organize in two divisions: Premier Ag and Premier Energy.

Premier Ag will offer integrated agronomic and agricultural services, including Truterra, the only farmer-owned, farmer-driven food and ag sustainability program in the United States. Through SwineLink, the cooperative provides comprehensive management to family-owned pork facilities, enabling family farms to operative farms in a healthy and environmentally sound manner. Grain marketing services will also be provided, enabling the cooperative to purchase grain from customers.

Premier Energy will provide thousands of customers with much needed quality propane. Also, vehicles from fleets to school buses will be served with fuel from CountryMark Fuel. Its propane business provides for heating solutions for homes and businesses, as well as agricultural structures.

"Premier Ag was formed in 1927 by a group of farmers who saw the need to leverage product availability at a competitive rate and what started with these local farmers grew to more than 3,000 members and a cooperative with multiple divisions open to the public," said Harold Cooper, CEO of Premier Companies. "This merger of cooperatives who shared similar cultures and unique understanding of agriculture and energy markets will enable us to offer ever-growing expertise and offerings to our customers. Today, going forward as Premier Companies, we are proud to remain locally owned by our neighbors here in southern Indiana and we'll return earnings local to our member-owners."

Now, Premier Companies has 11 locations for those needing crop-related help, such as crop protection, plant food and sales.

With the merger of White River and Premier Ag comes 17 Premier Energy Countrymark fueling centers.

For information about Premier Companies call 812-522-4911.

TIMED ONLINE • NO-RESERVE FARM RETIREMENT AUCTION

BIDDING CLOSES: MONDAY, OCTOBER 18 STARTING AT 10:00 A.M. CT

ITEMS ARE LOCATED AT THE FARM NEAR MOUND CITY, KANSAS • PHYSICAL ADDRESS: 10520 MASSEY RD., MOUND CITY, KS 66056 (MOUND CITY IS LOCATED APPROXIMATELY 60 MILES SOUTH OF KANSAS CITY)

- John Deere 7830 MFWD tractor, 2,646 hours, SN 1RW7830RCAR032220

Purdue webinar examines potential impact of ASF in China, Hurricane Ida

By Michele F. Mihaljevich Indiana Correspondent

WEST LAFAYETTE, Ind. – A reported rise in African swine fever (ASF) cases in China could impact U.S. exports of corn and pork to the country, according to Jim Mintert, the director of Purdue University's Center for Commercial Agriculture.

Private sources out of China are saying the ASF situation in the country is much worse than the government is admitting, Mintert said. From what is being reported by those private sources, their stories "don't match up with what the (Chinese) government is telling us," he explained.

"It's impossible to get a really accurate assessment of how large the hog herd is (in China) and the impact for grain and pork exports," Mintert said. "There are reports ASF has come back in a big way in China. That could impact negatively their need for corn from the U.S. If pork production will be smaller (in China), what are the implications for exports from the U.S.? Given the friction between the U.S. and China in recent months, will they look for other sources for their pork imports?"

Chinese government reports include estimates more comparable to reports issued by the USDA in this country, he noted. Private sources don't provide the same level of detail, Mintert said, adding information from those sources is generally more anecdotal.

The Center hosted a corn and soybean outlook webinar Sept. 13. Mintert also spoke with Farm World after the webinar about exports and usage.

Hurricane Ida, which hit Louisiana and the gulf region in late August, left many without power, including shipping ports and elevators. The result has been shipping delays and a temporary closure of the Mississippi River.

"I don't think we can really over state the impact of the hurricane on those export channels," he said. "It's really caused exports to grind to a halt. Some of the elevators, I think, have come back online, but some of them are still offline, still don't have power. I think the damage to the grain shipping industry is probably, at least initially, every bit as strong as when we had (Hurricane) Katrina 16 years ago. How that plays out over the next few weeks is going to be really important in terms of our ability to recapture some export channels and export market opportunities."

Depending on how long it takes for the facilities to fully reopen, the United States may lose some ability to completely recover markets that might have been temporarily lost, Mintert said.

As for ethanol, the continued pandemic may be keeping travel down, which has implications for corn usage, he stated. Not quite 40 percent of the nation's corn crop goes toward ethanol, Mintert noted.

"Over the summer, some travel came back," he said. "The USDA anticipates a modest recovery in usage and demand. But you see lots of news stories about people's unwillingness to go back to the office. The day-to-day going to work is the driver on usage. We may not be seeing the pick up in commuting activity."

Mintert was joined in the webinar by Michael Langemeier, a Purdue professor of agricultural economics, and Nathanael Thompson, an assistant professor. Thompson discussed the best time to sell corn and soybeans. In making that decision, he said farmers should consider the costs to store their crop on farm versus using commercial off-farm storage.

For corn and soybeans, there appears to be little risk associated with storing the crops through the end of the year, Thompson said. "As you look further down the road, there's a lot more that can happen but in the short run – between now and the end of the year – storing that, whether you were to take a position in the futures market or just store it on hedge – at least a portion of the crop that you stored – that's really not a terrible strategy."

Langemeier said 2020, 2021 and 2022 were and will be good years, but not as good as 2007-2013.

"It looks like there's going to be money for owner withdrawals for family living, making principal payments and some money for expansion, but not quite as much as what there was in that earlier period," he explained. "There's still enough money in '21 that you're going to see some people looking at making some machinery purchases this year."

High Octane Fuel Summit promotes the benefits of ethanol to fuel retailers

Growers Association (ICGA) hosted its annual High Octane Fuel Summit in Indianapolis Sept. 16.

The summit is designed to tout the benefits of higher blends of ethanol fuel to fueling station retailers and similar stakeholders. More than 50 of those stakeholders attended the event to learn more about Unleaded 88, a blend of 15 percent ethanol, and E85, an 85 percent ethanol blend. The expansion of ethanol is crucial to Indiana's corn

Ethanol is one of the most important customers of corn farmers," said ICGA President Mike Beard, a corn, soybean and hog farmer from Frankfort, Ind. "Here in Indiana, a multi-year average of 45 percent of our corn goes to the production of ethanol, and the numbers are similar in many other corn-producing states. The ethanol produced with U.S.-grown corn is used both domestically and internationally. In the 2019-20 marketing year, the United States exported 1.36 billion gallons of ethanol."

Beard said ICGA has been working on legislation such as the Next Generation Fuels Act, which was introduced into the U.S. House of Representatives with bipartisan support - including Rep. Jim Baird (R-Ind.) who is a co-sponsor. Baird is also an original co-sponsor of the Year- Round Fuel Choice bill, which would allow year-round sales of 15 percent ethanol blended fuels. This proposal has a companion bill in the U.S. Senate. Both bills will bring more fuel choice to consumers and help to lower greenhouse gas emissions in the United States, Beard reported.

"I'm proud to say that the Indiana Growers Association has supported a number of bills in Congress this session that would increase ethanol's space in the tank,"

Operating throughout Europe and based in Finland, eFlexFuel builds and sells kits that allow motorists to convert their cars to flex-fuel vehicles that are able to use E85. Tuomo Isokivijarvi, CEO of eFlexFuel, said they have sold more than 30,000 conversion kits in Europe, and they are now moving to the American market. He said the kits are simple to install and are completely automatic. To sell their kits, eFlexFuel is educating the public about the benefits of using E85.

"We are going to do educational using marketing about Isokivijarvi said.

"We know there are people who have a negative image of flex-fuels and E85. We want to change that," said Juha Honkasalo, eFlexFuel's chief of business development. "E85 is an affordable race fuel for the streets that is available throughout the U.S. People need to learn about it."

Among the chief competitors for higher blends of ethanol is the emergence of electric vehicles (EVs). Debnil Chowdhury of IHS Markit, an international market research company, said EV use is growing in some areas, but that liquid fuels continue to dominate the market. He said places such as India and South America are not seeing penetration of new electric vehicles.

"We're not one of the bullish companies on EV demand in the short term," Chowdhury said. "We are actually seeing more of an increase in hybrid electric vehicles - cars that can run on both gasoline, ethanol and electricity."

He said demand for gasoline, and

decline as more motorists shift to electric vehicles. "We don't necessarily listen to what President Biden is saying or what Congress is telling us," Chowdhury explained. "We look at what auto manufacturers are saying and what consumer demand tells us."

He said that there may be opportunities for ethanol in jet fuel production; however, ethanol's place in the market will be impacted by increased EV sales. "We expect to see production peak and start falling sometime in the 2030s," Chowdhury

Growth Energy is a U.S. trade association based in Washington, D.C., working to advance pro-biofuel policies and expand consumer access to higher blends of ethanol. Chris Bliley, senior vice president of regulatory affairs for Growth Energy, told summit attendees that access to Unleaded 88 has been expanding rapidly in recent years. Unleaded 88 is gasoline blended with 15 percent ethanol - also called E15. In 2017, only five terminals across the country offered E15. Bliley said there are 247 terminals offering E15 today.

However, a recent court decision eliminated the year-round sale of Unleaded 88 throughout most of the country. This is a reversal of a Trump Administration policy that allowed year-round sales of the 15 percent ethanol-blended fuel. "We need to work to get year-round E15 approved before the summer driving season starts again on June 1, 2022," Bliley said. "This can have a very real impact on the amount of ethanol that is consumed."

Tennessee man pleads guilty to timber theft from state forest

NASHVILLE - A Pikeville, Tenn., man has pleaded guilty to stealing timber from Bledsoe State Forest.

In June, Agricultural Crime Unit (ACU) Special Agents with the Tennessee Department of Agriculture charged John T. Simmons with timber theft after Simmons was seen loading logs onto a trailer along a forest road.

After a grand jury indictment, he pleaded guilty to all charges, including theft of property, criminal trespass, and vandalism. Simmons will serve one year probation and must pay back the value of the logs and the costs of retrieving the stolen

The ACU and the Division of Forestry worked with Bledsoe County's law enforcement and district attorney on the case. The stolen logs were part of a salvage sale from timber that was blown down in the area.

"Whether the timber theft is intentional or accidental, on public or private land, it can lead to fines and possible jail time," ACU Captain Greg Whitehead said. "The estimated value of the 24 stolen logs, in addition to the employee and equipment costs associated with this case, were part of the penalties assessed. Stolen timber can be hard to track, and we were fortunate that Simmons was observed stealing the logs. ACU will follow every lead and use every tool at our disposal to find and prosecute timber thieves."

Bayer prepares for release of product to combat corn rootworm

By Tim Alexander Illinois Correspondent

ROANOKE, Ill. – Corn rootworm management is being taken to the next level through a new generation of management options employing a revolutionary three-tiered approach. The science behind the new approach was a topic of discussion at the recent Bayer Crop Science 2021 Roanoke FOCUS tour.

Jim Donnelly, who is involved in Bayer's current SmartStax Pro field trials, said the company's product is the first trait to launch that employs a three-stage mode of action to combat corn rootworm. "Essentially we are taking our SmartStax products and Bt traits, those two modes of action, and combining that with a third mode of action. The benefit to farmers from that third mode of action is increased control and efficacy on corn rootworm," said Donnelly, a technical agronomist for Bayer's Dekalb and Asgrow brands for the past seven years.

Based in north-central Illinois, Donnelly's clients are farmers located primarily north of Interstate 80 to the Wisconsin state line. Dozens of farmers attended Bayer's tour at the Bayer Crop Science FOCUS site near Roanoke (Woodford County) Aug. 26-27 to hear Donnelly describe just what that third mode of corn rootworm management involves.

"All the previous modes of action revolve around using Bt proteins; this is totally different," Donnelly explained. "With this one, essentially what we are doing is we have identified a particular protein that is crucial for the insect's survival. We are blocking that process from occurring within the rootworm. This is something we have talked about for a number of years but is just being commercialized. The product will be ready for use next year, in limited quantities."

SmartStax Pro is an RNAi technology, with the "i" standing for "interference." Two Bt proteins within the product act below-ground to destroy beetles instantly after they consume root material. The RNAi technology controls beetles for longer periods of time and is effective for aboveground pest control, including protection from European corn borer, southwestern corn borer, fall army-

worm, black cutworm and corn earworm.

Because RNAi technology works differently than a soil-applied insecticide or Bt-traits to control corn rootworm, it can increase corn's ability to defend itself against corn rootworm, also known to farmers as "the billion-dollar bug," according to the Bayer crop specialist.

"Bayer implemented a number of studies across the Corn Belt to test the product's efficacy in various soils and climates, with a focus-on high pressure situations," Donnelly said. 'We looked at not only SmartStax Pro but at a number of traits on the market. We looked at current SmartStax, and basically whatever products growers can buy right now (to fight corn rootworm). We are still compiling that data, though some of the initial data we are getting are just as we expected to see - that SmartStax Pro is providing incremental control over SmartStax and other competitive traits that are on the market."

With corn rootworm populations extremely high in 2021, Donnelly encouraged farmers to continue to rotate their corn crop with other cash crops to avoid overwintering rootworm beetles – even after Smart-Stax Pro becomes available commercially this fall. Since beginning its research, Bayer Crop Sciences has received a lot of queries from farmers wondering when they will be able to purchase the product from their input retailers.

"They are asking for the next trait in order to battle corn rootworm," said Donnelly, who wouldn't speculate as to what SmartStax Pro will cost over the current SmartStax product. "We'll know more when we launch the products this fall."

Though SmartStax Pro will be available in limited supply this fall, by this time next year the product will be rolled out in greater quantities, according to the Bayer Crop Sciences website.

Deer hunters safety tips

With the deer reduction zone seasons underway and the statewide archery deer season starting Oct. 1, Indiana's Conservation Officers want to remind hunters to stay safe.

The various deer hunting seasons run through Jan. 31, 2022. It is estimated more than 300,000 people will SPAULDING OUTDOORS participate in some form By Jack Spaulding of deer hunting in Indiana during the span of seasons.

The most common injuries during deer seasons are accidents involving tree stands and elevated platforms. Hunters should follow the safety tips listed below when hunting from an elevated position:

Before the hunt:

- Read and understand the tree stand manufacturer's instructions.
- Check tree stands and equipment for wear, fatigue, and cracks or loose nuts/bolts, paying particularly close attention to parts made of material other than metal.
 - Practice at ground level.
- Learn how to properly wear your full-body safety harness.

During the hunt:

- Wear your full-body safety har-
- Use a tree stand safety rope.
- Make certain to attach your harness to the tree before leaving the ground, and that it remains attached to the tree until you return to the ground.
- Maintain three points of contact during ascent and descent.
- Use boots with non-slip soles to avoid slipping.
- Use a haul line to raise and lower firearms, bows and other hunting
- · Make certain firearms are unloaded, action open and safety on before attaching the haul line.

Additional safety tips:

- · Carry emergency equipment, such as a cell phone and flashlight.
- Make a plan before you hunt.
- Tell someone your plan, including where you will be hunting and when you plan to return.
 - Stick to your plan.
- Identify game before pointing a
- Know your target and what is beyond it.

All Hoosiers may resume feeding birds

The DNR has announced Hoosiers in all Indiana counties may now resume feeding birds. The DNR had recommended a statewide morato-

rium on bird feeding earlier this summer to slow the spread of a still-undetermined illness killing birds across the state. Biologists identified more than 750 possible cases in 76 counties involving a specific set

of clinical signs, including crusty eyes, eye discharge and neurological

The actions of many Hoosiers significantly helped the DNR's work related to the disease outbreak. By taking down their feeders and submitting more than 4,300 reports, residents enabled DNR staff track the disease, detect regional differences, and provide updated recommendations for feeding birds. The DNR appreciates the efforts and actions of Hoosiers statewide.

Residents throughout Indiana may again put out their feeders if they are comfortable doing so and are not observing sick or dead birds in their yards. DNR strongly encourages residents who do so to clean seed and suet feeders at least once every two weeks by scrubbing feeders with soap and water, followed by a short soak in a 10 percent bleach solution. Cleaning feeders helps keep birds healthy and helps prevent the spread of disease. Feeders should be thoroughly rinsed and dried before being filled with birdseed. Hummingbird feeders should be cleaned at least once a week with a 10 percent bleach solution and rinsed thoroughly.

DNR biologists also encourage Hoosiers to continue reporting any sick or dead birds they find to: on.IN. gov/sickwildlife. Reports help DNR staff continue to track the outbreak and identify new disease events and reoccurrences.

The USGS National Wildlife Health Center's avian disease experts and other scientists are continuing their investigative work on the unidentified bird disease. Indiana DNR has provided samples to the national laboratory to aid with its testing.

'Fuzz: When Nature Breaks the Law'

THE BOOKWORM SEZ

Terri Schlichenmeyer

"Fuzz: When Nature Breaks the Law" by Mary Roach c.2021, W.W. Norton &

Company, \$26.95, 308 pages

The pawprints were enormous.

That was your first thought when you saw them on the ground. Someone in the neighborhood just got a new dog the size of a horse. Is it close to Halloween? Or

there's a Sasquatch in the 'hood. Or maybe, as in the new book "Fuzz" by Mary Roach, you share the block with something that could eat you.

Murder, theft, assault, destruction of property. It happens all the time between us and nature. But as Mary Roach discovered, there's a reason it's called wildlife: toothed-andclawed scofflaws don't always get caught and they rarely see jail time.

So what kind of criminals are we looking at here, Your Honor?

Take bears, for example. Roach attended WHART classes in British Columbia, where mutilated mannequins help officials learn how to determine bear bites from wolf bites from scavenger nibbles. In Aspen, she learned that bears are really good at gently breaking into houses to find food but they're not the only guilty parties: we humans are partially culpable in the bears' snack-pilfering habits.

Elephants, as she learned, aren't the long-lashed, big-eared snugglers from the movies. In India, they can be destructive to crops and venge-

ful to people, especially if they have grudges or are in musth. In that case, elephants have been seen stepping on vil-

lagers and tearing them limb-from-limb - though, because people there consider pachyderms as deities, the killers are rarely, if ever, treated negatively for their actions.

That's not quite the case with leopards in the Middle

Himalaya, where the animals have killed hundreds of people through the years by seizing them from be-

In India, macaque monkeys live to "harass people." Cougars can attack you (but they rarely do). Trees can become a "danger." Deer, dromedaries, all dangerous.

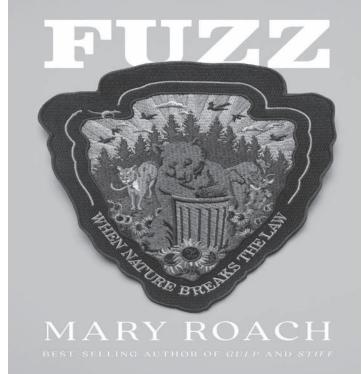

You can't pet a bison. No selfies with a bear or moose. Leopard territory is off-limits. Please don't feed the animals, so what can you do? You can laugh and learn by reading "Fuzz."

Make no mistake, though: while author Mary Roach has a sneakup-on-you sense of humor that will make you snort, what she shares with readers is serious stuff. As proof, she offers tales of animals doing things that humans would be arrested for doing and, like humans, this stuff can be bloody. It can be stomach-churning.

It can be fascinating because Roach takes readers around the world with experts who know, sometimes firsthand, about the real habits of these

> creatures that seem so familiar. Reading that, seeing why elephant handlers are paid more, learning about "ridiculously lovable" attackers and furry light-fingered extortionists. shows that unlawful ursas exist, camels can act like criminals, and sometimes, nothing's more apt than the word "jailbird."

> you're someone who loves to read aloud passages of your current obsession, "Fuzz" is your book. Clear your throat, prepare those around you; you shouldn't wait to get your paws on

Spaulding

are investigating an off-road vehicle (ORV) crash claiming the life of an adult male. The crash occurred Sept. 18 at 9:25pm near the 9000 block of South County Road 75 West.

Initial investigation shows Tyler Asche, 36, of Madison, was traveling downhill on a gravel roadway when he lost control of his side-by-side ORV. Asche, who was not wearing a seatbelt, was partially ejected from the ORV and pinned underneath as it came to rest on its side.

He was transported to the University of Cincinnati Medical Center and was later pronounced dead. The passenger in the ORV, who was wearing a seatbelt, only suffered minor inju-

The investigation is still underway, and an exact cause of death is to be released pending autopsy results. Conservation officers were assisted by Indiana State Police, Ripley County Sheriff's Department, Friendship Fire Department, Ripley County EMS and Ripley County Medic Service.

Readers can contact the author by writing to this publication, or e-mail to jackspaulding@hughes.net.

Spaulding's books, "The Best of Spaulding Outdoors," and his latest, "The Coon Hunter And The Kid," are available from Amazon.com.

Beck's offering summer internships in 2022

ATLANTA, Ind. - Beck's, the largest family-owned retail seed company in the United States, offers an immersive summer internship program by providing college students with unique opportunities and an impactful experience.

"It's our mission that interns have an experience beyond their day-today duties by creating a culture of mentorship and personal growth," said Bethany Gremel, director of culture and brand experience at Beck's.

In the summer of 2021, the company hosted 27 interns across multiple locations in Indiana, Kentucky, Ohio, Illinois and Iowa. Beck's internship program stretches across multiple departments in Practical Farm Research (PFR)®, research, corn breeding, production, research technology, finance, human resources, education and marketing. Since 2017, Beck's has also invited all interns to take part in a community service project and a professional development pro-

"Our internship program integrates students into the company allowing them to tackle real-world work assignments. Our interns see first-hand the impact they make at Beck's," said Tanner Maxey, Beck's talent acquisition specialist.

Danielle Dillon is a sophomore at the University of Missouri studying agribusiness management. Dillon was a PFR intern at Beck's Effingham, Ill., facility in the summer of 2021. Dillon shares that her internship taught her the art of collecting and analyzing data, but the connections she made became the most memorable aspect of her internship.

All Beck's internships are paid and students can receive college credit, if applicable. The 2022 internship term will begin late-May and will conclude in early August.

Beck's will be attending career fairs

- Purdue University
- Iowa State

To qualify for an internship, applicants must be enrolled as a full-time at tanner.maxey@beckshybrids.com.

student or a graduate of an accredited college or university. For more information and to apply, visit www.beckshybrids.com or email Tanner Maxey

Program to provide money to meatpackers affected by Covid

OMAHA, Neb. (AP) — Meatpacking workers and farm workers who were severely affected by the coronavirus pandemic will be eligible to get grants of up to \$600 per person as part of a new \$700 million aid program the U.S. Department of Agriculture announced recently.

Officials said the grants are meant to defray some of the costs workers bore as many of them bought their own protective equipment or took unpaid leave as the virus tore through their industries even as they were required to keep showing up for work.

"While the rest of America could work from home, these brave men and women continued to show up for work every single day to ensure that we all food on our tables that we could eat," said Marc Perrone, president of the United Food and Commercial Workers union. "Meatpacking plants experienced some of the most deadly COVID-19 outbreaks when the pandemic first came around and there were workers that are deserving of our help, and our thanks and our support."

Last spring, the virus tore through meatpacking plants, where workers stand shoulder-to-shoulder on production lines. The UFCW union, which represents roughly 80 percent of the nation's beef and pork workers and 33 percent of its poultry workers, estimates that at least 132 meatpacking workers died of COVID-19 and at least 22,000 workers have been infected or exposed to the virus.

At the height of the outbreaks last spring, the meat industry's production fell to about 60 percent of normal levels as a number of major plants were forced to close temporarily for deep cleaning and safety upgrades or were forced to work at slower speeds because of a shortage of workers.

For instance, more than 1,300 Smithfield workers were sickened and four died last year when the virus rampaged the company's Sioux Falls, South Dakota, plant. At a major pork plant in Waterloo, Iowa, more than 1,000 of the Tyson Foods plant's 2,800 workers were infected and at least six died.

"I think it's important that we recognize that doing this essential work has also come not only at a

potential physical risk but also at a financial risk," Agriculture Secretary Tom Vilsack said. "Many of these workers have had to out of their pocket pay for masks or personal protective equipment during the course of this pandemic. some have had to take unpaid medical leave."

The grants to workers will be handed out by an assortment of nonprofit groups that apply to work with the government. Agriculture Secretary Tom Vilsack said he hoped to keep administrative costs and requirements to apply for the money to a minimum so more workers could be helped.

"I'm hopeful that we'll be able to provide as much help to as many people as possible," said Vilsack.

A small part of the aid package worth \$20 million will provide grants to grocery store workers as part of a pilot program.

In addition to the grants to workers, Vilsack said the USDA would soon be announcing another \$700 million aid program to send money to food processors, farmers markets, distributors and other food vendors affected by the pandemic.

setting in the evening, this Moon

passes overhead in the middle of

the day, encouraging creatures

to be more active at that time,

especially as the high-pressure

systems of October 2 and 7

Weather Trends

Weather history suggests that the cold waves of Middle Fall are likely to cross the Mississippi River on or about October 2, 7, 13, 17, 23 and

October's threatening days will be like that of September's. New Moon on October 6, within two days of lunar perigee, will bring more than a 50 percent chance of frost to states across the northern half of the United States. Full moon on October 20 repeats those chances of a freeze and brings the first chance of an early blizzard to the West and an increased likelihood of a late hurricane in the Caribbean.

September 30 and October 1 each bring a 45 percent chance of highs in the 80s, but that is the last time this year that chances will rise so high. Most of the days in the period will be in the 60s or 70s, with the latter predominating. On October 4, however, a ten percent chance of highs only in the 40s occurs for the first time since May 25, and the new moon on the 6th is likely to bring light frost to northern counties. Precipitation is lightest on the 28th (just a 15 percent chance of showers on that date); the rest of the days this week rain comes 30 percent of the time.

Zeitgebers

(Events in Nature that Tell the Time of Year)

Spicebush is yellowing as box elders are shedding. The toothed leaves of beggarticks darken to purple overnight.

Pods of the Eastern burning bush are opening; hawthorn berries redden; wild grapes are purple. Milkweed pods burst in windy, rainy nights

Peak leaf color typically occurs in late September along the Canadian border; the best color occurs during early to middle October in most states above the Ohio Valley.

Streaks of scarlet have appeared on the oaks, shades of pink on the dogwoods throughout the Midwest and East.

Mind and Body

The S.A.D. Index, which measures seasonal stress on a scale from 1 to 100, rises sharply through the first week of October, reaching a troublesome high of 48 on October 6. The coming radical changes in the foliage, the disappearance of flowers, the morning chill and the lengthening night all combine with lunar phase to create an abrupt end to the best period of the year for seasonal balance.

In the Field and Garden

Five years in ten, a light frost has struck most parts of the lower Midwest by this date.

All around the region, leaves IMPRISONMENT PRIISMMOENTN have turned yellow on most of the ENGAGEMENT EEGGANTNEM soybeans; they blend right in with the ENFORCEMENT EENNFORMETC full-blooming goldenrod. In a typical INDICTMENT vear, farmers have cut two out of GOVERNMENT TNEMNREVOG every three ears of silage corn.

town. Fall apples and grapes are half picked, and the great pear, cabbage, and cauliflower harvests are underway.

Sow next spring's garlic under the dark moon. Mark your calendar to harvest that crop in the second or third week of June.

Twenty percent of the winter wheat has ordinarily been planted by today, 20 percent of the soybeans cut. In many years, all dry onions have been harvested by today.

This week is an excellent period for digging root crops and for cutting gourds, winter squash, and pumpkins.

ALMANACK CLASSICS

The Nicest Thing Anyone Ever Did For Me by Eleanor Gnandt, Wellington, Ohio

During World War II, my boyfriend, George, was called into the service.

pattern of frost- My parents had agreed that if he got a leave after his radio training, we could get married. One Saturday in late September, I got a letter saying that he would be home Tuesday. Arrangements were made for a formal wedding. We had a sit-down supper for 200 guests on Thursday. That Sunday he left Cleveland for San Francisco.

> At Thanksgiving, he called asking me to join him in California. We were both very young and had never been away from home, but I left by bus. George had several days leave for the time I was supposed to arrive.

> During the war, civilians were "bumped" from transportation to give service men the room. I had been traveling for five days and only got to Salt Lake City because of "bumping." There were two women who were also heading west, and we got acquainted. We all got put off the bus at the same places and began talking, wondering how long it would be before we got to San Francisco. We spent all our days and nights in the bus stations when we weren't riding.

> Finally, when this one bus was announced, some nearby sailors who recognized our predicament grabbed our luggage, took us by the arm and told the driver: "This is my wife," and got us on the bus. When we got to San Francisco, they left us.

> My husband had met every bus for five days and had only a few hours to spend with me and get me settled in a room before returning to the ship. Without those sailors overhearing us talk, and coming to our rescue, I would not have seen my husband. That was one of the nicest things that could have happened to a young woman, away from home for the first time, scared and alone.

Motorists, farmers reminded about road safety during harvest

By Michele F. Mihaljevich **Indiana Correspondent**

INDIANAPOLIS - As harvest season begins to ramp up, motorists and farmers are being reminded about ways to be safe on the road.

The Indiana State Department of Agriculture (ISDA) launched its Harvest Safety Campaign last

"It's my favorite time of the year, we're going to pumpkin patches and apple orchards," Indiana Lt. Gov. Above: As fall harvest season ramps up, safety are on the roads moving field to field with combines and tractors. We want to alert motorists that farmers are out there producing our food. We're hoping motorists will slow down and have respect."

We can't take for granted the importance of protecting our farmers and motorists, noted Crouch, who serves as the state's secretary of agriculture and rural development.

The National Highway Traffic Safety Administration (NHTSA) keeps tabs on the number of fatal roadway crashes involving farm equipment, and the number of deaths in those crashes. Farm equipment, as defined by the agency, includes tractors and combines but not trucks.

Nationally, 275 people were killed in 262 fatal roadway crashes involving farm equipment from 2017 to 2019, according to the latest numbers from NHTSA. Regionally, Illinois had 14 deaths in 13 fatal crashes; Indiana, 12 deaths, 12 crashes; Iowa, 15 deaths, 14 crashes; Kentucky, eight deaths, eight crashes; Michigan, seven deaths, seven crashes; Ohio, 10 deaths, 10 crashes; and Tennessee, nine deaths, eight

It's important to spread the word about highway safety annually because each year, new drivers take to the roads, said Bruce Kettler, ISDA director. "Driving around farm vehicles could be new to some of the people," he explained. "We might have people moving out to rural areas, moving out of the city. We have to remember it constantly changes."

ISDA website (www.isda. in.gov) offers several tips to motorists, including to be patient and careful when attempting to pass farm equipment. The site reminds drivers to allow plenty of time to reach their destination, not to pass within 100 feet of an intersection, railroad grade crossing, bridge, elevation structure or tunnel, and not to tailgate farm equipment. Motorists shouldn't try to pass farm equipment on the left without ensuring they aren't attempting to make a left-hand turn.

farm equipment, including lights and flashers, is in good working order before they go out to the fields, Kettler said. "A 'slow vehicle' sign in important. And when they're going to make a turn, they should make sure they're slowing down, use their mirrors, make sure traffic is clear around them. If they have motorists behind them, if and where they're able, they should pull over and let traffic pass."

Candi Engler farms around three suburbs in the Des Moines, Iowa, metro area. She said she's seen a lot of close calls between motorists and farm equipment.

"We have equipment where people don't expect it," she said. "We're places where they don't necessarily expect us. I find it funny; they know the field is there. Do they think it magically gets farmed and that we must do it at night? Motorists are either very courteous and helpful, or they're impatient and in a hurry. There doesn't seem to be any in between."

Suzanne Crouch said. "And farmers experts remind farmers and motorists to respect each other on the roadways.

> In the mid-1990s, one of the farm's hired hands was T-boned by a gravel truck while attempting to make a lefthand turn. He was injured but has since

> "He had his turn signal on," she noted. "We're very careful. We assume the person behind us doesn't know we're turning. Most large equipment doesn't have great visibility. We try to watch the time of day we move equipment. From 7 to 9 a.m. and 4-6 p.m., it's not a good idea to move equipment then. Sometimes you can't avoid it. You do the best you can."

> Cameras have been installed on some of the farm equipment to help the drivers see any cars behind them, Engler said. "An easy thing for farmers to do is know what's around you, be sure you have good visibility. Make sure you have good lighting and markings, including a slow-moving vehicle sticker. Motorists don't pass if it's not a passing zone and if you don't have good visibility. At a stop sign, motorists will often look left and then turn right. I'm coming toward the intersection (from the right) and I'm taking up both lanes. Just be patient.

> Mike Naig, Iowa secretary of agriculture, said, "Farmers have a very important job to do this fall. When the weather is good, they're working around the clock to get their crops out of the field. Please be patient when you encounter farm equipment on rural roadways. Slow down and give the driver plenty of room. Expect the unexpected and be courteous to your fellow motorists. We want everyone to have a safe harvest season."

> Vermeesch, Farm Bureau legislative counsel, said farmers and motorists have a shared responsibility on the road.

> "Safety is always a priority," he stated. "Slow down and be on the lookout for farm equipment. And be alert. Patience for both the motorist and farmer goes a

Motorists should pay attention to slow Farmers should make sure their moving vehicle signs, Vermeesch said, noting those signs should only be used on slow moving vehicles. Some people, he added, use the signs as driveway markers.

> "Watch for flashing amber lights (from the farm equipment) and reflective tape," Vermeesch said. "Look for the driver of the farm equipment. If the motorist can't see the driver, that means the driver can't see them."

> Motorists shouldn't pull out in front of a slow-moving vehicle and then slow down, he said. "Make sure you have ample space and check your rear-view mirror before moving back into the lane (after passing)."

> Farmers should leave gaps between vehicles when several are traveling together. "It's much easier and safer to pass one vehicle at a time at safe speed rather than several," Vermeesch said. "Also, allow for a following vehicle with flashing lights.

> "Everyone has a right to use the public highway. Motorists and farmers need to find a way to share the road."

"COME EARLY & BRING A FRIEND!"

Hot weather limits per cow milk production

MIELKE MARKET

WEEKLY

By Lee Mielke

Falling cow numbers driven by higher feed costs and tightening farm margins, plus intense hot weather impacting output per cow, resulted in a smaller increase in August milk output than expected and the weakest year over year gain since June 2020.

The USDA's preliminary data shows production at 18.84 billion pounds, down 282 million pounds or 1.5 percent from July, but 208

million or 1.1 percent above August 2020. It was the 15th consecutive month to top year ago output. The 24-state total hit 18.0 billion pounds, also up 1.1 percent from a year ago. Revisions lowered the July 50-state estimate by 18 million pounds from last month's report, to 19.1 billion pounds, up 2 percent from 2020.

Cow numbers totaled 9.48 million, down 19,000 from July (15,000 from New Mexico alone), third month in a row cow numbers fell from the previous month, but still 106,000 above a year ago. July numbers were revised down 1,000 head.

August output per cow averaged 1,987 pounds, down 1 pound from 2020.

California was up 0.7 percent on a 15-pound gain per cow offsetting 1,000 fewer cows. Wisconsin was up 2.6 percent on a 20-pound gain per cow and 21,000 more cows. Idaho was up 1.1 percent on 9,000 more cows offsetting a five-pound drop per cow. Michigan milk output was up 3.9 percent on 17,000 more cows. Output per cow was unchanged.

August dairy cow culling was well above the previous month and year, according to the USDA's latest Livestock Slaughter report. The data shows an estimated 261,400 head were sent to slaughter under federal inspection, up 13,500 from July and 36,100 or 16 percent above August 2020. Culling in the eight-month period totaled 2.07 million head, up 21,300 or 1 percent from the same period a year ago.

StoneX cautioned however that slightly more imports and an extra kill day this year means the daily pace of domestic dairy cow slaughter was up about 11.1 percent but, "We're still killing them faster than we can replace them. This isn't fresh news but it's worth repeating because \$1.65 cheese and \$5 corn will do little to change this dynamic. Also it's worth mentioning that while corn prices have been high all year, for many dairy producers the increase is really only starting to be felt in the last month or so. All things equal, this dynamic has the potential to accelerate on farm changes and propel slaughter rates in fourth quarter."

American-type cheese crept up to 823.6 million pounds, up 6 million or 0.7 percent from July and 33.7 million pounds or 4.3 percent above a year ago. The "other" cheese category saw its number slip to 582.6 million pounds, down 26.8 million pounds or 4.4 percent from July, but 19.8 million or 3.5 percent above a year ago.

That put total cheese at 1.43 billion pounds, down 21.1 million pounds or 1.5 percent from July, but still a bearish 55.4 million pounds or 4 percent above a year ago.

Cheese demand is still outperforming 2019 and 2020 levels, according to StoneX, which suggested, "We can attribute a good chunk of that to strong exports thus far and with

global cheese prices pushing higher over the past month that could continue to be the case since U.S. prices sit at a discount."

Strength remained in this week's Global Dairy Trade which saw the weighted average up 1 percent, following the 4 percent jump on Sept. 7. Traders brought just under 54 million pounds of product to market, down from 55.3

million on Sept. 7.

Chinese demand at the GDT remained subdued, according to StoneX, but South East Asia and the Middle East picked up the slack.

Meanwhile, China's August imports continue to impress. Whole milk powder totaled 163 million pounds, up 146.6 percent from August 2020 and up 41.9 percent year to date. Volume expanded from every key supplier, according to HighGround Dairy.

Skim milk powder imports, at 74.5 million pounds, were up 22.8 percent and topped year ago numbers for the eighth consecutive month and marked a new all-time record high for the month, according to HGD.

Butter totaled 12 million pounds, up 8.4 percent, and cheese imports amounted to 34.5 million pounds, up 50.1 percent from a year ago. Fluid milk and cream import growth was the second strongest, HGD said, following whole milk powder, "and that despite anecdotal chatter that milk production is strong throughout China."

Whey imports, at 137 million pounds, were up 12.1 percent from a year ago, with YTD up 33.3 percent, most coming from the United States and up 32 percent from a year ago.

HGD said, "The inventory situation within China is a hot topic at present but the holiday season will help to absorb heavy stocks and result in strong import volumes through the end of the year. As shipping container shortages remain widespread, China is likely ramping up purchases earlier than normal to make sure product hits their borders by January without interruption. There is also an increased need to keep inventories well above prior year to meet the rising internal demand that has been propelled by the pandemic."

U.S. fluid milk sales continue to plunge. USDA's latest data put July sales of packaged fluid milk products at 3.5 billion pounds, down 6.3 percent from July 2020, after plummeting 6.7 percent in June. Conventional product sales totaled 3.3 billion pounds, down 6.2 percent from a year ago. Organic products, at 221 million pounds, were down 9 percent, and represented 6.4 percent of total sales for the month. Total packaged fluid milk sales for the first seven months 2021 amounted to 25.6 billion pounds, down 5.3 percent from 2020. Conventional product sales totaled 23.95 billion pounds, down 5.5 percent. Organic products, at 1.7 billion, were down 2.1 percent, and represented 6.4 percent of total milk sales for the period.

Dairy margins were steady to slightly stronger over the first half of September with limited price movement in the milk and feed markets, according to the latest Margin Watch (MW) from Chicagobased Commodity & Ingredient Hedging LLC.

The MW stated that "strength in dairy exports has been a vital source

(Mielke continued on page 14B)

Sometimes artificial insemination is the answer if the bulls can't cut it

Once upon a time a Cattle Baron, on the advice of his court consultants, turned out six yearling bulls in his cattle country kingdom. In no time at all The Six Dwarfs spied a Snowy White heifer in heat. For Dopey it was love at first sight. He broke into a full gallop, urging his fellow dwarfs to follow him, It's the Pitts "Hi ho, hi ho, it's off to work we By Lee Pitts go." The six bull calves followed the Charolais heifer everywhere she

In Dopey's case, love was blind. The young dwarf of a bull backed off about a hundred yards took a run and tried to impregnate Snowy White in her ear. Dopey didn't know which end he was supposed to be making love to. He was willing but not able.

went, but darned if they knew why.

Bashful on the other hand, knew quite well what was expected of him but he was saving himself for just the right bovine. Free sex without a commitment was

beneath him. The matrons of the royal court found him to be a bashful breeder.

Happy was a swell bull. He was an admirer of males but not a follower of females. Happy was happy just hanging around with his fellow dwarfs.

Grumpy didn't like all the competition for Snowy White's affection. He wasn't into group sex either. The natural urge for Grumpy was to joust with any bull who tried to make Snowy White their love object. He was the jealous type.

Meanwhile back at the castle, the Cattle Baron spent most of his time sitting on The Royal Porch watching the antics of the Six Dwarfs and

Cattle Baron, like everyone else in the cattle business, was caught in a cost/price squeeze. If he didn't get a calf crop the terrible King would come and take away Snowy White and all his other cows too in the Royal cattle truck.

Sneezy sure didn't help the pocket book. He spent most of his time in the sick pen eating expensive alfalfa hay and overdosing on antibiotics. Sneezy was a hypochondriac dwarf of a bull. When the birds and the bees were explained to Sneezy something got lost in the translation. He got stung by a bee once and thought he was expecting. He needed plenty of bed rest.

So did Sleepy it seemed. Snowy White would never leave a male heir if left up to Sleepy. He showed no interest at all in coming out from

growing increasingly worried. The under his shade tree to breed Snowy White. His sex drive was in neutral, and it was said of Sleepy that one day his ship would come in and he'd be too lazy to unload it.

> After Snowy White came back in heat three months in a row the Cattle Baron became desperate. While shaving one morning the Baron looked into his shaving mirror and said, "Mirror, Mirror on the wall, these Six Dwarfs won't get my cows bred by fall."

> Much to the Baron's surprise the mirror answered back sarcastically. "There were seven Dwarfs you will recall, you better call Doc to breed them all."

> So, the Cattle Baron had his cows bred artificially and lived happily ever after.

Mielke

FROM PAGE 13B

of support for the market." July dairy product exports, which I reported previously, totaled 504.3 million pounds, according to the MW, up 7.9 percent from last year with year-todate exports running 11.6 percent ahead of 2020. Exports to Mexico totaled 114 million pounds and were 14.3 percent higher than 2020 while exports to China of 88.4 million were likewise strong with the YTD total on pace to exceed 2017's record.

The MW reported, "USDA increased yield projections for both corn and soybeans in the September World Agricultural Supply and Demand Estimates report which put slight pressure on both markets. The corn yield was raised to 176.3 bushels

per acre from 174.6 in August, with harvested area also increased by 600,000 acres to 85.1 million. Corn production of 14.996 billion bushels was up 246 million from last month and about 100 million higher than the average trade forecast with ending stocks of 1.408 billion bushels up 150 million from August. Soybean ending stocks of 185 million bushels were up 30 million from August, although the balance sheet remains historically tight."

barns deserve our Old attention and should be saved for the future

HOOSIER AG TODAY

By Gary Truitt

Indiana recognizes farms around the state that have been in continuous operation or continuous family ownership for 100 years and longer. This is an important program that helps recognize and honor our state's agricultural heritage. Yet, this award is based on the land. On that land stand many old barns, also testaments to our agricultural past and to state history. Like the land, these buildings also need preserving.

When pioneers migrated to Indiana, one of the first things they did was build barns. The barn was the center of the farming operation and was typically constructed from the raw materials located on the farm: wood, stone, and so forth. While today's agricultural technology seems amazing, the skill used to construct these old barns with nothing but chisels and an axe is also amazing. These structures also tell the story of our state's ethnic heritage. The styles and methods of construction varied greatly from one

Unfortunately, thousands of these structures have been lost to time and neglect. In recent years, many in agriculture have bemoaned the loss of this important piece of our heritage, but one man decided to do something about it. There are few people in the state who had more passion for the history and heritage of

agriculture than Mauri Williamson. Founder and creator of the Pioneer Village at the State Fair, Williamson also was the driving force behind the establishment of the Indiana Barn Foundation. This non-profit organization is dedicated to educating people about the importance of old barns and to helping preserve these historic structures.

To help generate funding for this effort, the Mauri Williamson Legacy Endowment has been established. This is fitting way to honor the legacy of the late Mauri Williamson and to help preserve the barns of which he was so fond. This is an endowment I strongly recommend you consider. You can get more information at Mauri Williamson Legacy Endowment at cicf.org.

Many of these old barns are finding a new life as wineries, antique shops, and wedding venues. There is something about the image and craftsmanship that attracts even those not involved in farming and who do not understand their significance. Unfortunately, much of modern agriculture does not possess this ambiance. A metal shed or grain bin is not likely to endure for the next 100 years. So, make an investment in the past to preserve it for the future.
